

TRIPLE CELL SOLAR POOL BLANKET

TRIPLE CELL SOLAR POOL BLANKET

The Triple Cell Solar Pool Blanket provides better heating, better insulation and ensures the pool stays warmer for longer. This is achieved through its unique 3-way cell bubble design. It also offers more protection from chemicals and harmful UV rays.

The manufacturing process ensures a more uniform thickness, unlike the traditional round bubble design that has an inconsistent thickness.

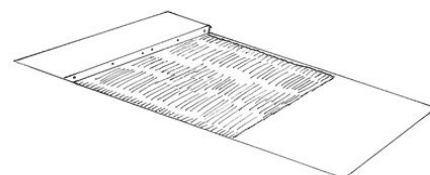

Materials, colors and dimensions

Colours

Deep blue

Materials

Polyethylene sheet, with a triple cell (610 micron) thickness.

Dimensions

The 610 micron Triple Cell measures 32 x 30mm in order to provide greater heat generation and insulation

Details TRIPLE CELL SOLAR POOL BLANKET

Characteristics:

Material: Polyethylene sheet, with a triple cell (610 micron) thickness

Weight: 550 gr/m²

Cell Height: 5-6 m

Width: 1400 mm +/- 10 mm

Thick woven film

Cell Width: 1300 mCell Size: 32 x 30mm

Accessories

Solar cover border

Reinforced border to fold

Border with roller straps

Intermediate border with a roller strap

Adaptable roller strap

Flexible advance float

Rigid float
